 - b. Data Dictionary
 - c. Key Design Decision
3. Entity Relationship Diagram

Database Purpose:

The purpose of the database model is to generate, process and maintain data to support vaccine distribution over different networks. The database enables coordination and ensures timely administration of vaccines to the intended recipients. It stores information about the vaccine manufacturers, vaccine distributors such as centres, pharmacies, and hospitals, also stores data regarding the patients receiving the vaccine such as which vaccine they have received, the age group they belong to and the location where they live. The database allows the organization to calculate the number of vaccines distributed, number of vaccines required, number of people partially vaccinated, number of people fully vaccinated, affected areas, and ensuring an efficient vaccine delivery.

Business Problems Addressed:

The following business problems are addressed by the database model:

- The database model maintains the information about the availability of vaccines at vaccination centres, hospitals and pharmacies.
- Stores the inventory records of different vaccines available at vaccination centres, hospitals and pharmacies.
- Stores data from the Purchase Department and the Inventory Department of the vaccination distribution location.
- Records are maintained about the purchase orders of vaccines by the vaccination distribution location.
- Also stores information regarding different vaccine manufacturers that supply vaccines to the distribution locations.
- Stores a record of the details of the vaccine recipient, along with the date of receiving first and second dosage.
- Enables area admin manages and facilitates the distribution of vaccines in a particular area.
- Provides recipients with the information regarding the vaccine manufacturer and distribution locations.
- It allows tracking of the number of vaccines administered, along with the number of dosages received by each recipient in a particular area.
- Enables storage of customer feedback for each dosage received.
- Stores tracking information for the delivery of purchase orders made by a distribution locations.
- Helps abridge the complexity between distribution locations and the recipients in a particular area.

Business Rules:

- Each recipient has a unique residential address and a single contact number.
- Each area admin must log in with unique login credentials to manage the operations for that area.
- Each distribution location receives one or more orders from multiple vaccine manufacturers.
- The availability of vaccines varies from area to area.
- Each distribution location is allowed to place a single order at a time from a single vaccine manufacturer.
- Each recipient can receive only two dosages of the same vaccine.
- Each dosage received by a recipient must have a minimum of 21 days gap.
- If vaccine V1 is available in area A1, and v1 is also known to be available in the pharmacies of division A, it can be inferred that the pharmacies in area A1 have vaccine v1 available.

Chens Relationship Diagram

Fig-1: Chens Entity Relationship Diagram

Database Dictionary:

Entity	Description	Alias	Occurrence
AreaAdmin	General term describing all the area administrators	AdminID	Each member of AreaAdmin is assigned multiples areas to administor
Area	Giving information about the covid impact on the area	AreaID	Each area is assigned specific vaccine manufacturers but the area admin can assign multiple vaccines to same area based on cases.
AreaVaccineDistribution	A lookup table containing address of pharmacy, hospitals and vaccination centers	LookupID	Each lookup table contains address to unique pairs of pharmacy-vaccine manufacturer, hospital-vaccine manufacturer & vaccination centers - vaccine manufacturers
VaccineManufacturer	Describes the vaccine manufacturer properties	VacManu	Each vaccination manufacturer can supply to multiple areas
Pharmacy	General term describing all the pharmacy administrators	PharmacyID	Each pharmacy admin has single vaccine available
PharmacyPurchaseDepartment	Provides information about the purchases made by the pharmacy	PharmacyPDId	Each PhPD can request vaccine from a single manufacturer at a time.
PharmacyInventoryDepartment	Keeps upto date inventory for the pharmacy	PharmacyIId	Each PhID must maintain a single vaccine manufacturer inventory.
PharmacyPurchaseOrder	Keeps the records of specific batch of vaccine delivered to the pharmacy	PharmacyPurchaseNo.ID	Each Purchase order contains a unique batch of vaccine discription
Hospital	General term describing all the hospital administrators	HospitalID	Each hospital has single vaccine available
HospitalPurchaseDepartment	Provides information about the purchases made by the hospital	HospitalPDId	Each HPD can request vaccine from a single manufacturer at a time.
HospitalInventoryDepartment	Keeps upto date inventory for the hospitals	HospitalIId	Each HID must maintain a single vaccine manufacturer inventory.
HospitalPurchaseOrder	Keeps the records of specific batch of vaccine delivered to the hospital	HospitalPurchaseNo.ID	Each Purchase order contains a unique batch of vaccine discription
VaccinationCenter	General term describing all the vaccination center administrators	VacCenterID	Each vaccination center can have multiple vaccine available
VacCenterPurchaseDepartment	Provides information about the purchases made by the vaccination center	VacCenterPDId	Each VacPD can request vaccine from multiple manufacturer at a time.
VacCenterInventoryDepartment	Keeps upto date inventory for the vaccination centers	VacCenterIId	Each VacID must maintain multiple vaccine manufacturer inventory.
VacCenterPurchaseOrder	Keeps the records of specific batch of vaccine delivered to the vaccination center	VacCenterPurchaseNo.ID	Each Purchase order contains a unique batch of vaccine discription
Customer	General term describing all the customer feedback	CustomerID	Each CustFeed must be for a single vaccine manufacturer
